

DERBIGUM COLD APPLIED

Safe. Flame Free. Low Odor.

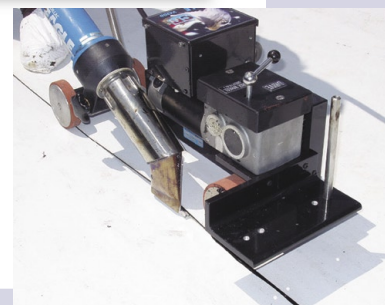

DERBIGUM's Cold Applied system is the safest, most environmentally friendly installation available.

Cold adhesive can easily be applied with a squeegee.

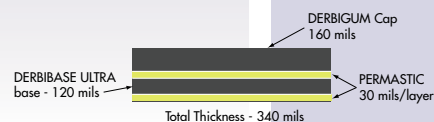

A traditional roof installation sometimes creates unacceptable noise, smoke and odors that negatively impact safety and convenience. That problem can be solved with DERBIGUM's remarkable **COLD APPLIED INSTALLATION PROCESS**.

By utilizing a special adhesive the unique DERBIGUM membrane can be applied with heat welded seams that produce a membrane that is watertight immediately. Unpleasant smells are minimized through the use of PERMASTIC Adhesive. Open flames are eliminated by the use of electric hot air welders on the seams. The DERBIGUM Cold Applied system is ideal for jobs where a torch is not permitted, due to site or building characteristics.

THE BENEFITS OF THE DERBIGUM COLD SYSTEM

- ▶ The special adhesive acts as an additional waterproofing layer, and doesn't chemically affect the integrity of the membrane itself.
- ▶ The job site is safer for workers and building occupants.
- ▶ The low VOC of PERMASTIC Cold Adhesive meets tough California emission standards.
- ▶ Roofers can easily monitor membrane adherence during installation, ensuring a positive seal that withstands extreme wind and weather.
- ▶ The membrane's longevity is enhanced due to additional thickness.
- ▶ The building owner has the option to go fully flame-free.
